SUMMARY

Python Developer Intern at WhiteLotus Corporation and Computer Engineering graduate (B.Tech, 2026). I build FastAPI backends, microservices and LLM-powered applications, and I am looking for Python Backend, FastAPI and AI Application Developer roles.

EXPERIENCE

Python Developer Intern, WhiteLotus Corporation June 2026 - Present

- Worked on the AI Document Analysis Platform (below): a five-service FastAPI backend with JWT auth, PostgreSQL, Redis, RabbitMQ and Celery.
- Contributing to development of an AI-agent-based product (in progress; company project, details confidential).

Python Fullstack Developer Intern, Qspiders (Software Training Institute), Ahmedabad From Dec 2025

- Python Full Stack training covering frontend and backend fundamentals.
- Hands-on practice with Python core concepts: OOP, data types, loops and functions.
- Built structured, responsive web pages with HTML, CSS and JavaScript; learned basic frontend-backend integration.

PROJECTS

AI Document Analysis Platform github.com/akshitthakkar/Ai-Document-Analysis

Python, FastAPI, PostgreSQL, Redis, RabbitMQ, Celery, Docker Compose, FAISS, Gemini API

- Designed a microservices backend with separate gateway, auth, document, chat and AI-worker services communicating over REST.
- Implemented stateless JWT authentication: tokens issued by a dedicated auth service and verified locally by every other service.
- Built PDF upload and processing endpoints with PostgreSQL storage and background embedding jobs via Celery and RabbitMQ.
- Used Redis for caching, session storage and API rate limiting; Docker Compose runs the PostgreSQL, Redis and RabbitMQ infrastructure.
- Worked with the retrieval-based document search and chat module that generates answers with an LLM.

Domino's Food Ordering System github.com/akshitthakkar/Dominos-Food-Ordering-System

Python, SQL, SQLite

- Built a Python Domino's-style ordering application with user authentication and menu management.
- Implemented signup and login with SQLite for storing user credentials.
- Enabled item selection by number, a cart and automatic bill calculation using OOP, loops, dictionaries and database handling.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript
Backend: FastAPI, REST APIs, Microservices Architecture, JWT Authentication, Pydantic, pytest
Databases and messaging: PostgreSQL, SQLite, SQLAlchemy, Alembic, Redis, RabbitMQ, Celery
AI applications: LLM-based applications, document search and chat (RAG), FAISS, Gemini API
Web and tools: HTML, CSS, Git, GitHub, Docker, Docker Compose, VS Code

EDUCATION

Silver Oak Institute of Technology, Ahmedabad 2022 - 2026
B.Tech in Computer Engineering | CGPA: 8.84

Puna International School, Ahmedabad 2020 - 2022
HSC | 77%

LANGUAGES

English, Hindi, Gujarati
